

DIAGNOSIS - REHABILITATION

Nystagview, E-scope

Wired Video Frenzel systems

Synapsys Video Frenzel systems are dedicated to the observation of ocular movements (horizontal, vertical and torsional), whether the nystagmus is spontaneous or stimulation-induced.

KEY BENEFITS

- Devices adapted to **numerous tests that control nystagmus** (spontaneous, position tests and positional tests, vibration-induced nystagmus, gaze fixation, head shaking test, BPPV maneuvers, caloric tests)
- Fast detection of disorders
- Ideal to start vestibular assessment
- Complete darkness and adjustable vision field
- Goggles suitable for children
- Patient comfort (light, foams and adjustable straps)
- Camera position adjustable

Cameras used with numerous Synapsys equipments : **upscaleable equipment throughout your development.**

E-SCOPE SYSTEM

NYSTAGVIEW SYSTEM
