## FOLDING ARMRESTS

They are composed of a stainless steel axle padded with washable polyurethane. They fold down completely to provide more comfort for patients with reduced mobility and for lateral observations and practices.

## STRONG HEADREST

There are two models available, both of them perfectly designed to keep the head of the patient in the required position during the examination.

Adjustable in height, it incorporates a quick removal system which facilitates the execution of positional tests and routine practices.

## COMFORTABLE FOR DOCTOR AND PATIENT

### AN ERGONOMIC PRODUCT

The OPTOMIC chairs design is based on the search for the comfort of the patient and ergonomics during exploration. This is the reason the geometry of its structure adapts to achieve the optimum distance between patient and doctor in every step of examination and treatment.

## ROTATION AND BRAKE

### ACCESSIBLE SYSTEM

The patient can be turned with great safety, stability and smoothness due to its high resistance bearings of conical rollers.

It has a double lever braking system, placed on either side of the seat, to avoid the doctor wasting time moving around the patient.

The 300° turn facilitates the examination of both ears.

< FOOTREST,  
LEGREST AND  
BACKREST >

## MOTORIZED ELEVATION SYSTEM

### A PRECISE SYSTEM

A pedal facilitates the perfect control of the chair. It activates the up /down and inclination movements. It has two memories for user personalization.

### HIGH RESISTANCE AND SMALL SIZE

The OP-S8 chair has a completely electrical system for the movement of the footrest and legrest, which is synchronized.

The legrest is concave to hold the patients calves for greater comfort and relaxation.

The range of the backrest movement goes from 80° to the Trendelenburg position.

**OPTOMIC®**

producing quality

The OPTOMIC OP-S8 chair is designed and manufactured using the best materials and most modern technologies. OPTOMIC's philosophy is based on the idea that both patient and doctor must be able to find a comfortable and safe position, to avoid unnecessary fatigue during an examination or surgical treatment.
